- Firebase (Cloud Functions, Firestore, Cloud Messaging)
- Datadog
- CI/CD
- Jira
- Ágil, SCRUM, Kanban

Idioms

English (Intermediate)

Resume

I'm an Internet Computing Technician who graduated from ETEC Vasco Antônio Venchiarutti and I'm currently studying Systems Analysis and Development at Cruzeiro do Sul University. I've been a NodeJS developer for five and a half years and my most recent experience was at MJV Tecnologia e Inovação, where I was working on a customer service/brokerage project for Bradesco Seguros.

My responsibilities included developing chatbot services using technologies such as IBM Watson (AI), NodeJS, React, MongoDB, SonarQube, Docker and microservices architecture. I'm also familiar with hexagonal architecture, version control using Git, GitLab and Bitbucket, and project management using Jira. I have experience in implementing internal solutions and services for customers on different service channels, such as WhatsApp and other internal Bradesco Seguros channels.

Throughout my career, I have also acquired skills in handling, processing and analyzing data for analytics tools. I have solid knowledge of coding and testing systems. As well as essential concepts for their execution such as TDD, DDD, Clean Code, SOLID and others. Within projects, I have always worked with CI/CD, ensuring that demands are met efficiently and within the established deadlines.

I'm always looking for further training and new opportunities to apply my skills and contribute to the growth of innovative projects.

Experiences

SEPTEMBER 2019 — AUGUST 2022

Systems Development Analyst, VBM Consultores, Jundiaí

Business consultancy services. I actively worked on the development of internal tools such as an ERP for controlling and managing day-to-day activities. Also a portal for running and recording online meetings.
